

Nikola Smileski

Software Engineer

+ Experience

Sklopi.mk - Sklopi.mk is a Macedonian platform for comparing computer components, allowing you to view prices and specifications from multiple stores in order to simplify the process of selecting and purchasing computer parts. Sklopi.mk is an automated application that uses advanced Web Scraping technologies, which collects and updates data from leading Macedonian computer component stores on a daily basis. The collected data is analyzed and presented to users through an intuitive interface, in order to provide a clear overview of the products and their specifications.

InTec System - InTec System provides latest IT equipment and solutions in Macedonia and region, from world leading IT companies. As a software engineering intern I worked on document management systems (DMS) and process automation. I focused on front-end development using React. I contributed to creating user interfaces and integrating DMS functions. I gained practical experience in building efficient and scalable web applications.
